

Accuracy, Efficiency, and Growth Built Right In

**Document SDKs for architecture,
engineering, and construction (AEC)**

Build Better

Document Workflows

A document SDK (Software Development Kit), is a powerful document processing tool that enables AEC professionals to improve collaboration and information accessibility, save time and resources with automation, reduce manual errors, meet strict regulations, and make sure projects stay on track.

The Main Challenges in AEC

Due to the distributed nature of AEC projects, reliable collaboration on documents like blueprints, proposals, reports, contracts and legal agreements, permits, and assessments is essential. The inability to easily access these documents across devices and locations can lead to **missed deadlines, regulation non-compliance, and miscommunication about critical project decisions.**

To keep projects on track and ensure the right people get the right info, document processing technology that enables cross-platform and offline access, as well as high-fidelity rendering, is invaluable.

Where is this pain felt the most?

Architectural Drawings and Blueprints

Rendering and collaborating on large files can take a lot of bandwidth.

Project Proposals and Reports

Generating essential communication documents manually can be time-consuming and resource-intensive.

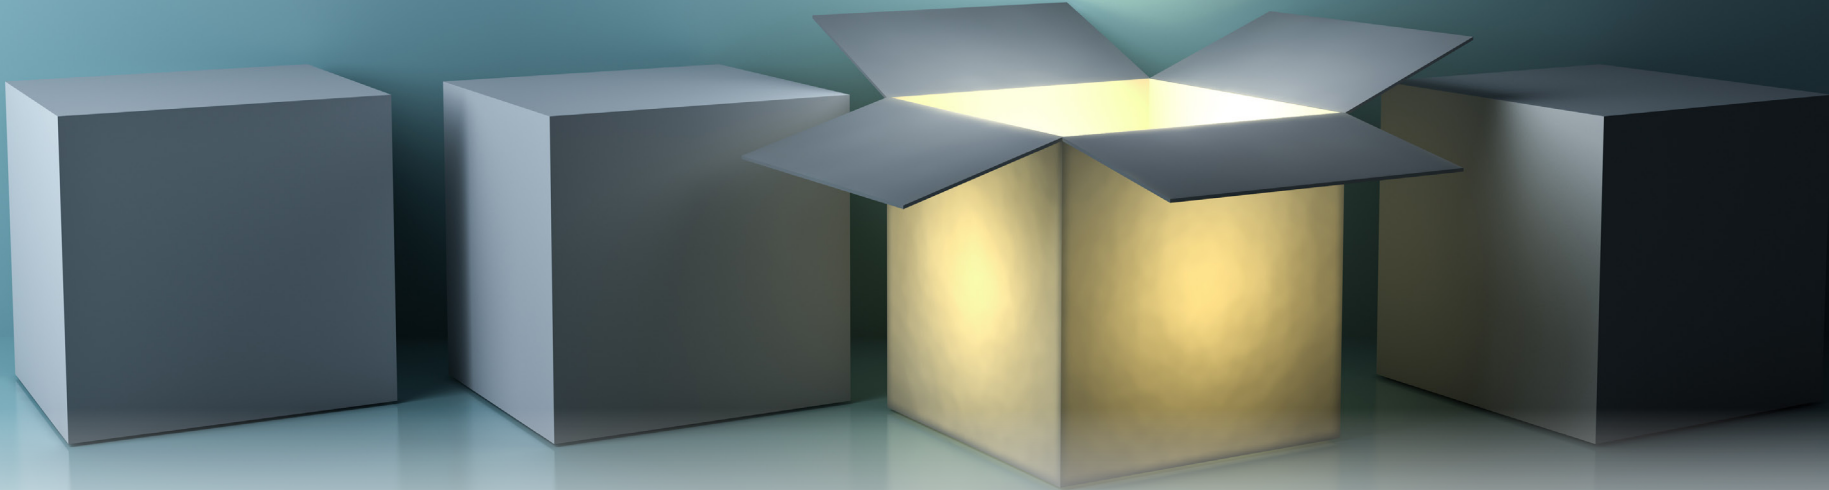

Permits and Compliance Documents

Manual errors in these documents can result in fines, penalties, and legal repercussions.

Contracts and Legal Agreements

Missing signatures can cause delays with subcontractors, suppliers, consultants, and clients.

How Can SDKs Help?

Apryse can help the AEC industry by providing solutions for

Automation
Boost efficiency with automated document creation, conversion, and data extraction.

Accuracy
Ensure all information is accurate and reduce manual errors with automated document processing.

Collaboration
Get everyone on the same page with real-time viewing, synchronized annotation, simultaneous editing, and more.

Digital Signatures
Enable all parties to quickly sign critical documents from anywhere.

High-Fidelity Rendering & Conversion
Quickly view and convert 30+ file formats, including PDF, CAD, and BIM.

Why

Apryse

Over Anyone Else?

PROVEN BACKING

Supported by renowned investors Silver Smith Capital and Thoma Bravo, with a history serving billions of users, millions of developers, and thousands of global enterprises.

CORE SECURITY

Our SDK, fully embedded in your app code, ensures top-tier data security by eliminating external calls and transmission. This client-side processing maintains industry compliance and keeps user data safe.

RELIABLE EXPERTISE

Our team of 100+ R&D experts ensures that the Apryse Developer Suite covers the latest use cases and compliance standards.

EXCEPTIONAL SUPPORT

Our responsive [support](#) and documentation provide help and guidance, empowering you with advanced technology and industry-leading assistance.

PROPRIETARY CUSTOMIZATION

Our PDF SDK offers customization, reliability, and peace of mind, enabling you to prioritize innovation and growth over troubleshooting and maintenance.

“Sometimes we say we use the best-in-class PDF technology, and sometimes we even say we’re a PDF technology company, because we know PDF through our partnership with Apyrse.”

ALISTAIR MICHENER
DRAWBOARD FOUNDER AND CEO

Drawboard PDF is a **bestselling AEC productivity solution** that enables global teams to collaborate on design project documents in real-time across browsers, desktop, and mobile devices.

They partnered with Apyrse to create a collaboration solution for large design files that is as intuitive as pen and paper.

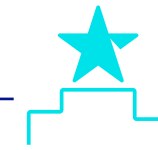

Customer

Case Study

The Challenges

- ⚠ Find a way to make real-time PDF collaboration as easy as using a pen
- ⚠ Support large files, including complex CAD drawings
- ⚠ Differentiate Drawboard from competitors
- ⚠ Implement a long-term and fully supported solution

The Results

- ★ Gained access to a comprehensive PDF SDK with broad support for markup
- ★ Implemented high-fidelity rendering for all types and sizes of design document
- ★ Customized and improved the UX with Apyrse's flexible open-source UI
- ★ Introduced a future roadmap with regular collaboration on new features and development

“Apyrse demonstrated superior speed and functionality out-of-the-box. In contrast, the competition took a lot of shortcuts, and it was obvious in the user experience.” ~ **Alistair Michener**

Key Features

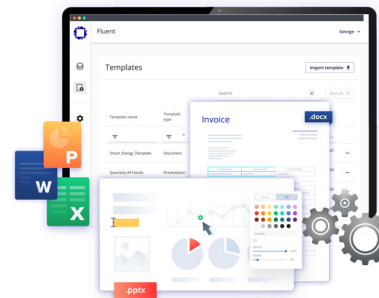

View & Annotate Client-Side

Securely open and annotate a wide range of AEC documents, ensuring timely feedback to keep projects on track.

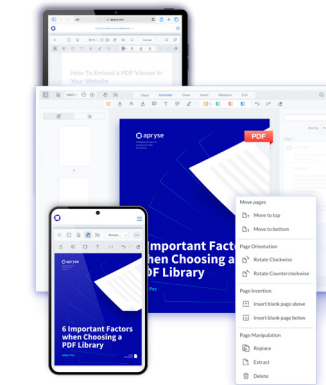

Real-Time Review & Approval

Effectively collaborate in real-time to help speed up the processing of critical documents like contracts.

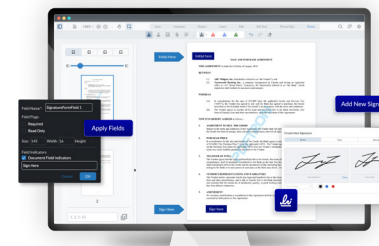

Generate Documents from Data & Templates

Connect data sources to automatically create reports, permit applications, and more.

PDF Text Editing & Manipulation

Enable quick text edits in PDFs with user permissions for secure and compliant document updates.

Digital Signature Workflows

Establish customized document signing workflows to expedite approval processes and ensure timely service delivery.

Intelligent Data Extraction Automation

Maintain information integrity. Extract and process data, text, and tables from scanned PDFs with AI-powered accuracy.
